

# Boral™ Hip & Ridge Block

## INSTALLATION GUIDE

The following guidelines are provided to ensure proper installation of Boral™ Hip & Ridge Block, however local building codes may differ so please consult with the local building department for any different or additional installation requirements.

Tile surface must be clean and dry for secure adhesion of Boral™ Hip & Ridge Block's butyl adhesive. Install when ambient temperatures are between 41°F to 104°F. Store dry between 41°F and 77°F, max at 104°F (risk of butyl softening and difficulties removing release film).

1. Place a trim tile piece at both ends of the ridge or hip and strike lines onto the field tiles at the outside edges of the trim tiles. This guide line can be used to ensure Boral™ Hip & Ridge Block is not installed too far beyond the width of the trim tiles.
2. Roll out and align Boral™ Hip & Ridge Block starting at one end of the ridge or hip board and fasten with staples, nails or screws through the centerline on the Boral™ Hip & Ridge Block onto the top of the ridge or hip board with the butyl strips facing down (Fig. 1 and Fig. 2 ). Allow for 6 inch overhang at gable to fold onto and fasten to gable. When starting another new roll, overlap the ends at least 2 inches. **Note:** keep roll out of direct heat or sunlight prior to application to allow easier release of the plastic release film from the butyl adhesive strips.
3. Remove the plastic release film from the butyl (Fig. 2) and press adhesive edges firmly to the roof surface, starting at all peaks, then forming down into the valleys (Fig. 3).
4. At junctions of ridges and hips, make sure there is sufficient overlap of the ridge portions onto the hip portions and that water can run down properly without getting blocked.
5. Attach trim tiles on ridges and hips according to the tile manufacturer's design recommendations. The ridge or hip tiles should not lay on the seam where the woven polypropylene and metal side strips are joined (Fig. 4 and 5).
